Internship Projects

SKILLINFYTECH IT SOLUTIONS

Embedded Systems – Internship Projects

Project 1: Digital Thermometer using Arduino

📝 **Question:**

Design a digital temperature display system using Arduino and sensors.

What It Does:

- Reads temperature using LM35/DHT11
- Displays on LCD screen
- Can set alert threshold

Concepts & Skills Learned:

- Sensor interfacing
- ADC concepts
- Display modules

🎯 **Goal:**

To understand embedded system basics with microcontroller programming.

Embedded Systems – Internship Projects

Project 2: Smart Blind Stick for Visually Impaired

📝 **Question:**

Create a walking stick that uses sensors to detect obstacles and alert the user.

What It Does:

- Uses ultrasonic sensors
- Provides vibration or buzzer alerts
- Optional GPS/GSM module

Concepts & Skills Learned:

- Embedded sensor systems
- Mobility aids
- Low-power circuit design

🎯 **Goal:**

To build socially impactful assistive technology using embedded systems.

Embedded Systems – Internship Projects

Project 3: RFID-Based Attendance System

📝 **Question:**

Develop an attendance system using RFID reader and microcontroller.

What It Does:

- Reads RFID tags
- Logs time and ID to EEPROM or SD card
- Displays confirmation on LCD

Concepts & Skills Learned:

- RFID interfacing
- Memory handling
- Authentication logic

🎯 **Goal:**

To explore identity management and automation via embedded programming.

Embedded Systems – Internship Projects

Project 4: Digital Lock System using Keypad

📝 **Question:**

Design a 4-digit PIN-based lock using keypad and servo motor.

What It Does:

- Takes user input from keypad
- Matches with stored password
- Unlocks with motor

Concepts & Skills Learned:

- Input devices interfacing
- Actuator control
- Security systems

🎯 **Goal:**

To learn basic embedded security systems and keypad handling.

Embedded Systems – Internship Projects

Project 5: Automatic Plant Watering System

📝 **Question:**

Build a soil-moisture-based irrigation system using embedded devices.

What It Does:

- Reads moisture level
- Controls motor to water plant
- Sends notification if low

Concepts & Skills Learned:

- Sensor-driven automation
- Relay/motor control
- Energy efficiency

🎯 **Goal:**

To automate agriculture using embedded sensing and control.

Embedded Systems – Internship Projects

Project 6: Line Follower Robot

📝 Question:

Construct a robot that can follow a black line on white surface using IR sensors.

What It Does:

- Reads surface contrast
- Adjusts motor speed and direction
- Follows predefined path

Concepts & Skills Learned:

- Motor driver circuits
- PID control basics
- Real-time sensor feedback

🎯 Goal:

To understand robotics fundamentals through sensor-motor coordination.
